 [Flag question](#)

Given an ArrayList, the task is to get the first and last element of the ArrayList in Java.

Input: ArrayList = [1, 2, 3, 4]
Output: First = 1, Last = 4

Input: ArrayList = [12, 23, 34, 45, 57, 67, 89]
Output: First = 12, Last = 89

Approach:

1. Get the ArrayList with elements.
2. Get the first element of ArrayList using the get(index) method by passing index = 0.
3. Get the last element of ArrayList using the get(index) method by passing index = size – 1.

Answer: (penalty regime: 0 %)

```
1 import java.util.ArrayList;
2 import java.util.Scanner;
3
4 public class Main {
5     public static void main(String[] args) {
6         Scanner scanner = new Scanner(System.in);
7         ArrayList<Integer> list = new ArrayList<>();
8         int n = scanner.nextInt();
9         for (int i = 0; i < n; i++) {
10             int element = scanner.nextInt();
11             list.add(element);
12         }
13         int first = list.get(0);
14         int last = list.get(list.size() - 1);
15         System.out.println("ArrayList: " + list);
16         System.out.println("First : " + first + ", Last : " + last);
17         scanner.close();
18     }
19 }
```

 [Flag question](#)

The given Java program is based on the ArrayList methods and its usage. The Java program is partially filled. Your task is to fill in the incomplete statements to get the desired output.

```
list.set();
list.indexOf();
list.lastIndexOf()
list.contains()
list.size();
list.add();
list.remove();
```

The above methods are used for the below Java program.

Answer: (penalty regime: 0 %)

Reset answer

```
1 import java.util.ArrayList;
2 import java.util.Scanner;
3 public class Prog {
```

```

4 public static void main(String[] args) {
5     Scanner sc = new Scanner(System.in);
6     int n = sc.nextInt();
7     ArrayList<Integer> list = new ArrayList<>();
8     for (int i = 0; i < n; i++) {
9         list.add(sc.nextInt());
10    }
11    System.out.println("ArrayList: " + list);
